DETAILED ACTION

Continued Examination Under 37 CFR 1.114

1. A request for continued examination under 37 CFR 1.114, including the fee set forth in 37 CFR 1.17(e), was filed in this application after final rejection. Since this application is eligible for continued examination under 37 CFR 1.114, and the fee set forth in 37 CFR 1.17(e) has been timely paid, the finality of the previous Office action has been withdrawn pursuant to 37 CFR 1.114. Applicant's submission filed on 4 August 2003 has been entered.

Response to Arguments

2. Applicant's arguments filed 4 August 2003 have been fully considered but they are not persuasive.

In regards to Applicant's argument that Moseley does not teach a plurality of terminal devices for a user to select from, the Examiner does not agree. Moseley clearly discloses a plurality of terminal devices [column 5, line 17-column 6, line 43].

In regards to Applicant's argument that Moseley does not teach registration of the selected one of the plurality of terminal devices whenever a session is obtained with a server, the Examiner does not agree. Moseley clearly discloses this limitation [column 8, lines 31-45; column 10, lines 24-55, specifically lines 30-31]

Claim Rejections - 35 USC § 102

1. The following is a quotation of the appropriate paragraphs of 35 U.S.C. 102 that form the basis for the rejections under this section made in this Office action:

A person shall be entitled to a patent unless –

Art Unit: 2143

(b) the invention was patented or described in a printed publication in this or a foreign country or in public use or on sale in this country, more than one year prior to the date of application for patent in the United States.

2. Claims 1, 3, and 9 are rejected under 35 U.S.C. 102(b) as being anticipated by Moseley et al. [US Patent 5 193 114 A].

Regarding claim 1, Moseley discloses a network system formed by connecting a selected one of a plurality of terminal devices and a network server via a known communication system, wherein each of said plurality of terminal devices comprises:

means for retrieving information from a removable memory for storing user specific information, and means for transmitting user specific information and information of said selected one of said plurality of terminal devices used by a user as specific information said memory means is loaded [column 4, line 47-column 6, line 43; column 7, line 53-column 9, line 41, specifically column 7, line 65-66 (denoted as step "2") and column 8, lines 31-45; column 10, line 23-column 11, line 29, specifically column 10, lines 23-55]; and

said network server comprises means for receiving said specific information transmitted by said selected one of said plurality of terminal devices, means for registering said specific information whenever obtaining a session with said network server, and means for specifying said selected one of said plurality of terminal devices being used by said user by memorizing said specific information, wherein said means for specifying is part of said network server. [column 8, line 31-45; column 10, line 23-column 11, line 29, specifically column 10, lines 30-32]

Regarding claim 3, Moseley discloses the network system according to claim 1, wherein said means for registering erases said registered specific information when said memory means is extracted from said terminal device. [column 11, lines 15-25]

Regarding claim 9, Clark discloses the network system according to claim 1, wherein said network server further comprises means for sending a notification to said selected one of said plurality of terminal devices registered by said means for registering. [column 11, lines 1-27]
